EXPERIMENT

Title

SUB ARRAY WITH MAX SUM

Description

You are given a list of integers, and your task is to find the subarray with the maximum sum. Write a function or method to solve this problem efficiently and return the maximum sum.

Input:

n: the no of elements in the array

nums (List of integers): A list of integers (1 <= len(nums) <= 10^5)

Sample input:

8

-1 2 3 10 -4 7 2 -5

Sample output:

20

Explanation:

The max subarry sum is 20. The subarray is [2,3,10,-4,7,2]

Source Code:

```python
def max_subarray_sum(nums):
    max_sum = float('-inf')  # Initialize to the lowest possible value
    current_sum = 0

    for num in nums:
        current_sum += num  # Add the current number to the current sum

        if current_sum > max_sum:  # Update max_sum if current_sum is greater
            max_sum = current_sum

        if current_sum < 0:  # Reset current_sum if it becomes negative
            current_sum = 0

    return max_sum

# Input reading
n = int(input().strip())
nums = list(map(int, input().strip().split()))

# Get the result
result = max_subarray_sum(nums)

# Output the result
print(result)
```

RESULT

5 / 5 Test Cases Passed | 100 %
